

## PayXpress Version 2.0

### Benefits

#### PayXpress Version 2.0

- Improve customer service by allowing customers to pay outstanding balances at the entry keypad
- Increase revenues by enforcing late fee collections by locking out overdue tenants and forcing payment before allowing entry to the site
- Seamless integration with TaskMaster and the Credit Card Module to provide up to the minute information
- Allow customers to pay up to 12 months in advance from any designated keypad

The PTI TaskMaster PayXpress module allows customers the convenience of paying their overdue rent and fees at the gate or payment keypad, using a valid credit card. This helps ensure payment while still allowing them to access the facility once they have paid. The credit card processing occurs in real-time, so the customer knows within seconds if their card was approved or declined.

The built-in features of PayXpress give the owner a great deal of flexibility. Including restricting access after the customer pays to allow time to receive the funds before releasing their property. Additionally set the usage of PayXpress to hours when the manager is present to prevent delinquent customers from gaining entry during off-hours. Prevent tenants in violation of their lease from gaining access to remove their effects after the foreclosure or auction process has been started.

In addition you can enable the payment keypad to allow customer to pay their rents up to 12 months in advance improving your communications with tenants.

### Features

- Allow tenants to pay up to 12 months in advance at a keypad
- Accepts Visa, MasterCard and other popular card via Taskmaster Credit Card module
