THE KEY BENEFITS OF
CLOUD-BASED ACCESS CONTROL SOFTWARE
FOR SELF-STORAGE OPERATIONS

More and more industries are turning to cloud-based technology solutions for their impressive range of benefits. With the release of PTI's StorLogix Cloud, self-storage facilities can now take advantage of those same benefits with an upgraded cloud-based access control system. Below we've illustrated how migrating your access control software to the cloud can bring improve your connectivity and your operations.
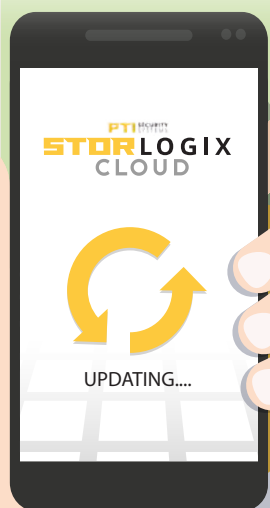

IMPROVED DATA RECOVERY

A cloud-based access control software that continuously performs automated data backups means that your data is always protected no matter what happens at your site. This preventative measure can make all the difference when you need to get a site back up-and-running.

ANYTIME, ANYWHERE ACCESS

A cloud-based access control software means that you can conveniently access a portfolio's information regardless of location. Anytime, anywhere access creates new opportunities for improved facility management, enhanced internal communication, and a better work-life balance for operators.

AUTOMATIC SOFTWARE UPDATES

Cloud-based solutions perform software updates automatically, eliminating the need to manually update your access control software. Self-storage owners and operators can rest assured that their system is continuously secured and up-to-date.

ENHANCED TECHNICAL SUPPORT

Cloud-based software offers better support capabilities by allowing support technicians and security integrators to access your account directly. This significantly improves a technician's ability to diagnose and resolve issues, resulting in less back-and-forth, less frustration, and less downtime.

DIAGNOSTIC DASHBOARDS

Customizable dashboards provide at-a-glance information of all on-site activity and device statuses across your portfolio. Cloud-based software offers enhanced functionality for self-storage operations by delivering granular information by geographic area or by a specific metric.

SINGLE LOGIN ACROSS A PORTFOLIO

Cloud-based access control software makes it easy to manage multiple sites from one location. Rather than visiting each facility, self-storage owners and operators can effectively manage their entire portfolio from any location via a single dashboard.
